Includes CODEDODGER® Remote Control. Safe-T-Beam® System must be installed to close the door. For use only with residential sectional overhead garage doors.

Homelink® and Car2U® compatible.

Need help or have questions?

DO NOT RETURN to the store.

For answers and assistance, visit www.overheaddoor.com or call Customer Service at: 1-800-929-3663

INSTALLER: LEAVE THIS MANUAL WITH HOMEOWNER
HOMEOWNER: SAVE THIS MANUAL FOR FUTURE REFERENCE

To reduce the risk of injury to persons or damage to property—Use this opener only with a residential sectional door.
If you are a Home Owner/End User and need help or have questions: call 800-929-3663.

OVERVIEW OF POTENTIAL HAZARDS
READ THIS SAFETY INFORMATION
Garage doors are large, heavy objects that move with the help of springs under high tension and electric motors. Since moving objects, springs under tension, and electric motors can cause injuries, your safety and the safety of others depend on you reading the information in this manual. If you have questions or do not understand the information presented, call your nearest trained door system technician or visit our website at www.overheaddoor.com

CONVENTIONS USED IN THESE INSTRUCTIONS
The following safety alert symbol and signal words are used throughout this manual to call attention to and identify different levels of hazard and special instructions.

⚠️ This is the safety alert symbol. This symbol alerts you to potential hazards that can kill or hurt you and others.

All safety messages will follow the safety alert symbol and the word “DANGER”, “WARNING”, or “CAUTION”.

- **DANGER** indicates an imminently hazardous situation which, if NOT avoided, will result in death or serious injury.

- **WARNING** indicates a potentially hazardous situation which, if NOT avoided, could result in death or serious injury.

- **CAUTION** indicates a potentially hazardous situation which, if NOT avoided, may result in injury or property damage.

- The word **NOTE** is used to indicate important steps to be followed or important considerations.

IMPORTANT INSTALLATION INSTRUCTIONS

⚠️ WARNING

TO REDUCE THE RISK OF SEvere INJURY OR DEATH

READ AND FOLLOW ALL SAFETY, INSTALLATION AND OPERATION INSTRUCTIONS. If you have any questions or do not understand an instruction, call The Overhead Door® Company or your local Overhead Door® Dealer.

- **DO NOT** install operator on an improperly balanced door. An improperly balanced door could cause severe injury. Repairs and adjustments to cables, spring assembly, and other hardware must be made by a trained service person using proper tools and instructions.

- Remove all ropes, and disable all locks connected to the door before installing operator.

- Where possible, install the door opener 7 feet or more above the floor. For products having an emergency release, mount the emergency release within reach, but at least 6 feet above the floor and avoiding contact with vehicles to avoid accidental release.

- **DO NOT** connect the operator to the source of power until instructed to do so.

- Locate the wall console button: A) Within sight of door. B) At a minimum height of 5 feet so small children cannot reach it. C) Away from all moving parts of the door.

- Install the entrapment WARNING label next to the wall button or console, in a prominent location. Install the emergency release handle on the emergency release cord.

- The operator must reverse when the door contacts a 1-1/2 inch high object on the floor at the center of the doorway. This is about the size of a 2" x 4" board laid flat.
2 Features

Begin here ONLY AFTER completing assembly and installation of the opener. Review the Assembly and Installation poster to ensure all steps have been performed.

Contact your Overhead Door® Dealer for an installation poster, or if needed, visit www.overheaddoor.com to download a PDF file.

SAFETY FEATURES

- **Safe-T-Beam® (STB) Non-Contact Reversing System**
  Puts an invisible beam across the door opening. The door stops and reverses to the full open position if anything passes through the beam. LED indicator lights on the powerhead and on the STBs provide a self-diagnostic code if an operational problem exists.

- **Safe-T-Reverse® Contact Reversing System**
  Automatically stops and reverses a closing door within two seconds of contact with an object.

- **Watch Dog™ Monitoring System**
  Monitors the Safe-T-Beam™ system to ensure proper functionality and will automatically stop and reverse a closing door if a problem is detected.

- **Manual Emergency Release**
  Manually releases door from door opener. Used during a power failure or other emergency to allow manual opening and closing of door.

- **SmartSet™ Electronic Programming**
  Easily adjust the programming to set limits and program new remotes.

- **Automatic Lighting System**
  One bulb lighting system supplies light for safer evening exits and entries. Turns ON when door is activated and automatically turns OFF 4 minutes later.

**NOTE:**

1. The Safe-T-Beam™ has no effect on the door during an opening cycle.
2. If the Safe-T-Beam™ detects an obstruction when trying to close the door, it will not allow the door to close.
3. When the garage door is closing, if Safe-T-Beam™ is interrupted by a person or obstacle, the garage door will stop its downward travel and reverse automatically to its fully open position.
4. If the Safe-T-Beam™ system fails, loses power, or is installed improperly, press and hold the wall console “open/close” button until the door reaches its fully closed position. If you release the “open/close” button on the wall console during the closing movement, the door will reverse automatically to its fully-opened position.

**CODEDODGER™**

An encryption system that enhances the security of the door opener by continuously changing the access code each time the remote is used. The door opener responds to each new code only once. An access code copied from a working system and tried again, will not control the door opener.

**Wall Console** (With selected models)

Operates door opener from inside garage. The wall console has an indicator light with: Open/Closed, Sure-Lock™, and independent light control buttons.

**HomeLink® and Car2U®** compatible. Refer to your motor vehicle manual or visit www.overheaddoor.com for instructions.

**PRE-PROGRAMMED REMOTE CONTROL**

For ease and speed of installation, the remote included with this opener comes from the factory, pre-programmed. No additional steps are required to activate the door using the remote.

**NOTE:** This will only work after installation is complete and Travel Limits have been set.

**NOTE:** If your operator has not been, or will not be professionally installed:
- Use this manual ONLY AFTER completing assembly and installation of the opener.
- Review the Assembly/Installation Poster and check that all steps have been completed.

Contact your Overhead Door® Dealer for an Assembly/Installation Instructions poster, if needed. You can also go to www.overheaddoor.com to download a printable file.
** Required Wall Control Installation **

In your carton you will find one of the following wall controls.

** NOTE:** Wall consoles from other manufacturers may not work with these openers. Use only the wall console provided with this unit. See warning.

** SERIES II WALL CONSOLE WITH WHITE BUTTONS **

- **Open/Close Button**
  - Opens and closes door from inside garage.

- **Indicator Light**
  - Red indicator backlight is ON.
  - When Sure-Lock™ is ON, the indicator light is OFF.

- **Sure-Lock™ Button**
  - LOCK disables controls after door is completely closed.
  - UNLOCK allows controls to work normally.

- **Independent Light Control Button**
  - Controls door opener lights from inside garage.

If you encounter a problem, check:
- White wire connected to terminal “W.”
- Striped wire connected to terminal “B/W.”

** FEATURES **

- **Indicator Light**
  - Large white button will display Red when wall console is properly wired and Sure-Lock™ is OFF. When Sure-Lock™ is ON, this light is off.

- **Open/Close Button**
  - Use this button to open or close garage door. When Sure-Lock™ is ON, the Open/Close button will CLOSE the door only.

  ** NOTE:** Constant button pressure in the CLOSE mode will override STB fault in the powerhead and close door.

- **Independent Light Control Button**
  - Use this button to turn powerhead lights ON. Powerhead lighting will remain ON until this button is pressed again or a door action has been completed.

- **Sure-Lock™ Button**
  - When Sure-Lock™ is ON, and the door is closed, the powerhead cannot be activated by the wall console or a remote.
  - Press and release to activate Sure-Lock™ (red light goes off).
  - Press and release to turn Sure-Lock™ OFF (red light goes on).

** TIP: Powerhead Connections **

** WALL BUTTON **

This is a lighted wall button. Press once to move the door.

If the button is not lighted, check:
- White wire connected to terminal “W.”
- Striped wire connected to terminal “B.”

** TERMINAL #1 = BROWN  
TERMINAL #2 = ORANGE  
TERMINAL #3 = WHITE  
TERMINAL #4 = BLACK **

Use of any other wall control can cause unexpected operation of the door and loss of lighting feature. Locate wall console within sight of door and far enough from door to prevent contacting it while operating the control. Control must be at least 5 feet above floor to prevent small children from operating it.
Programming Overview

NOTE: Before you begin programming, check to make sure there are no objects in the garage door opening.

INTRODUCTION

Now that your Overhead Door® garage door opener is installed, you will want to program the opener so that the door opens and closes properly and all remote devices operate correctly. The following steps guide you through setting your opener so it functions properly for you.

The following information will take you through programming your opener's functional settings for use.

OVERVIEW OF POWERHEAD CONTROLS

This section describes the programming functions on the powerhead of the opener. Use the following information to familiarize yourself with the buttons, LED indicators and products used to program functions.

Powerhead: There are 3 programming buttons and 2 LED lights on the powerhead. Each of the buttons is used to enter and complete the setup programming. The LED lights indicate status or a function change by illuminating ON, OFF, or ON FLASHING in one of three different colors: blue, red or purple.

There are 3 programs:
1. Door Travel Limits.
   - This program is used to set how far your door travels up and down.
2. Remote Programs (default menu)—only required for added remote control transmitters.
   - These show you how to program your remotes to synch with additional remote control devices, wall consoles, keypads and the powerhead.
3. Force Setting Program.
   - This program controls the force applied in during the closing and opening of your door. They are factory set and will rarely require adjustment only under certain circumstances.

NOTE: The 3 programming buttons are for programming ONLY. These buttons should NOT be used to operate the opener once the Required Programming section has been successfully completed.
Programming Information

TRAVEL LIMITS

WARNING

- Make sure doorway is in view and clear of obstacles and people to avoid injury or damage to property.
- DO NOT operate this unit from wall console before LIMITS are set. Severe damage to the opener can occur.
- The shuttle MUST be engaged to carriage BEFORE setting limits. See Installation Poster (if provided) or call Customer Service at 1-800-929-3663 or visit www.overheaddoor.com.

NOTE: If bullet has NOT been engaged to carriage, do so now. See page 12.

NOTE: Before setting limits confirm wall console red indicator backlight is ON. If not illuminated, check for correct wiring or the Sure-Lock switch may be activated. (On selected units.)

ORIENTATION

Standing under the opener’s powerhead - facing the door - looking up - this is the view you will see of the programming buttons and LEDs.

- Just remember—the pointed end of the button (like an arrowhead) points in the direction the carriage will move when that button is pushed.

NOTE: While setting limits, the powerhead has a 30 second time-out. You have 30 seconds to execute each step. If you see two solid red or flashing LEDs on the Powerhead, you have run out of time and must go back to the beginning of the step and start over. You can restart as many times as necessary to complete each step.

Closing Garage Door (Down Limit)

1. Lift door by hand until carriage engages the bullet on the rail.

2. Press and hold the down arrow button (–) until the long LED comes on blue. (The round LED stays off.)

3. Release down arrow button (–) and the long LED will begin flashing blue. (Round LED still off.)

4. Press and hold the down arrow button (–) to start closing the garage door. When the garage door is near the floor, release and press the down arrow button (–) to move the door in small increments (jog) until it is fully closed. Then release the button.

5. Press and release the program/set button—both LEDs flash blue and then go off.

NOTE: You can start and stop garage door movement using either the down (–) or up (+) button until your door is in the correct limit position.

The DOWN (CLOSED) TRAVEL LIMIT IS NOW PROGRAMMED.

(Travel Limits continued next page)
3 Programming Information

Opening Garage Door (Up Limit)

NOTE: Beginning with garage door closed is recommended but not necessary.

NOTE: While setting limits, the powerhead has a 30 second time-out. You have 30 seconds to execute each step. If you see two solid red or flashing LEDs on the Powerhead, you have run out of time and must go back to the beginning of the step and start over. You can restart as many times as necessary to complete each step.

Press and hold the up arrow button (+) until the long LED light comes on blue (round LED remains off).

Release up arrow button (+) and the round LED will begin flashing blue. (The long LED will go off.)

Press and release the program/set button—both LEDs flash blue and then go off. The UP (OPEN) TRAVEL LIMIT IS NOW PROGRAMMED.

The UP (open) limit is programmed.

BOTH DOOR LIMITS ARE NOW PROGRAMMED.
3 Wall Control Operation

Force Control

The force controls are automatically set when you use the wall control for the first time with your garage door. The door MUST complete one full cycle, from full open to full close and then, full close to full open, before the settings are automatically recorded.

1. With your garage door open, lay a 2” x 4” board flat on the floor at the center of the door opening.
2. Close the garage door using the Open/Close button on the wall control.

If the door stops before contacting the board or if it does not reverse direction to fully open after contact with the board, it may be due to an improperly set DOWN limit. Verify settings by:
1. Repeat the “Down Travel Limit” section (page 8) to make certain the door is closing tight against the floor.
2. Repeat the “Force Control” section on the left to set force limits.
3. Repeat the “Contact Reverse Test” above.

Repeat this process as needed until the door passes the Contact Reverse Test. For further help, refer to the “Maintenance and Adjustment” section/Regular Maintenance, page 14.

Contact Reverse Test

NOTE: The Limit and Force settings MUST BE COMPLETED before performing the Contact Reverse Test.

1. With your garage door open, lay a 2” x 4” board flat on the floor at the center of the door opening.
2. Close the garage door using the Open/Close button on the wall control.

When the door contacts the board, it should stop and reverse direction within 2 seconds to the fully open position. Red LED lights on the powerhead will begin to flash with the reversal of the door. Remove the 2” x 4” board after a successful contact reversal test. The next cycle will clear the flashing red LEDs.

NOTE: Force controls DO NOT require programming. Force limits are factory set and rarely require adjustments. Making adjustments to these settings is covered in the “Maintenance and Adjustments” Section of this Manual (page 14).

FORCE CONTROL IS NOW SET.
Remote Control Programming

REMOTES

NOTE: The remote controls included with this opener have been pre-programmed at the factory for your convenience.

NOTE: The following instructions are for remote control transmitters purchased separately in addition to those provided with this opener, but can also be used if any remote(s) may require re-programming.

NOTE: You have 30 seconds to execute each step. If you see two flashing red LEDs on the Powerhead, you have run out of time and must go back to the beginning of the step and start over. You can restart as many times as necessary to complete each step.

NOTE: Do NOT hold Remote too close to the Powerhead when programming Remote buttons.

NOTE: Each button on each Remote must be programmed separately, following these steps.*

14 Remove protective film for battery from remote.

15 Press and hold the Program-Set button (the round LED turns blue).

16 Release the Program-Set button (the long LED begins flashing purple).

17 Press and release the Remote button (The long LED turns purple).

18 Press and release the remote button again (both LED’s flash blue and then turn off).

NOTE: It’s possible to press the remote button too quickly or lightly. If the LEDs do not turn off, press the button several times to get confirmation as shown below. If the LEDs turn red, return to step 15 and repeat steps 15 through 19.

19 Press and release the remote button (the door should open or close).

The Remote is now programmed.
Repeat as necessary for additional Remotes.
Basic Programming is complete and your garage door is ready to use!

NOTE: For Car2U and HomeLink, park the car outside the garage with the ignition key in the “Accessory” position. Follow the Car2U or HomeLink instruction included in your vehicle manual to set the button in the car to Overhead Door® mode.

NOTE: Your older CodeDodger remote transmitters will operate this new model opener after programming, using the procedure on these pages.
Optional Programming

CLEARING MEMORY FOR REMOTES

1. Press the Program Set button on the powerhead until the round LED turns blue.

2. Release the Program Set button, round LED goes off and the long LED flashes purple.

3. Press up arrow button (+) and down arrow button (−) simultaneously on the powerhead until both LEDs flash blue and then turn off.

4. To verify the memory is cleared, use a remote that was previously programmed to the powerhead and press the button. The door should not move.

NOTE: The garage door opener will operate normally using the Wall Control.

NOTE: When the remote is pressed the round LED will flash blue but will not activate the door opener.

NOTE: Clearing Remotes from the Powerhead memory will clear ALL programmed Remotes and wireless Keypads. Your opener will no longer recognize any signal received from a missing Remote.

All remaining (or recovered) Remotes MUST BE reprogrammed as shown on page 10.

FCC and IC CERTIFIED

This device complies with FCC Part 15 and Industry Canada license exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular situation. If this equipment does cause harmful interference to radio or television reception, which may be determined by turning the equipment OFF and ON, the user is encouraged to try and correct the interference by one or more of the following measures: (a) Re-orient or relocate the receiver antenna, (b) Increase the separation between the opener and receiver, (c) Connect the opener into an outlet on a circuit different from that to which the receiver is connected, and (d) Consult your local dealer. Any modification or changes to this equipment which are not express or approved by the manufacturer could void the user's authority to operate the equipment.

This device complies with Health Canada’s Safety Code. The installer of this device should ensure that the RF radiation is not emitted in excess of the Health Canada's requirement. Information can be acquired at: http://www.hc-sc.gc.ca/ewh-semt/radiation/cons/wifi/index-eng.php
IMPORTANT SAFETY INSTRUCTIONS

WARNING

TO REDUCE THE RISK OF SEVERE INJURY OR DEATH, READ AND FOLLOW ALL INSTRUCTIONS.

1. NEVER let children operate or play with the door controls.
2. Keep remote away from children.
3. ALWAYS keep the moving door in sight and away from people and objects until door is completely closed. NO ONE SHOULD CROSS THE PATH OF THE MOVING DOOR.
4. NEVER GO UNDER A STOPPED, PARTIALLY OPEN DOOR.
5. Test opener monthly. The door MUST reverse on contact with a 1-1/2” high object (or a 2” x 4” board laid flat) at the center of doorway on the floor. After adjusting either the force or limit of travel, retest door opener. Failure to adjust the opener properly may cause severe injury or death.
6. When possible, use emergency release only when door is closed. Use caution when using this release with the door open. Weak or broken springs are capable of increasing the rate of door closure and increasing the risk of severe injury or death.
7. KEEP DOORS PROPERLY BALANCED. See your garage door Owner’s Manual. An improperly balanced door increases the risk of severe injury or death. Have a trained door system technician make repairs to cables, spring assemblies, and other hardware.

SAVE THESE INSTRUCTIONS

WARNING

- Garage door hardware (springs, cables, brackets, pulleys, etc.) are under extreme pressure and tension.
- DO NOT attempt to repair or adjust door springs or any hardware, and DO NOT OPERATE garage door automatically or manually if door is improperly balanced or springs are broken.
- CONTACT A TRAINED DOOR SYSTEM TECHNICIAN.

REGULAR MAINTENANCE

Basic monthly maintenance tasks include:
- Contact Reverse
- Lubricate door hardware
- Safe-T-Beam® System Check
- Door balance

A. Contact Reverse Test
   See page 9.

B. Lubricate door hardware
   Inspect door rollers and hinges and lubricate as needed using a light weight general purpose grease.

B. Safe-T-Beam® (STB) System Check

Check that both the RED and GREEN LEDs are ON steady. This indicates the system is working properly. If both LEDs are not ON steady, check the appropriate items below:

- STB red LED flashes.
  - Check for obstruction.
  - Check alignment.
  - Verify wire routing from STB to STB connection in powerhead.
  - Check for signal interference from another Safe-T-Beam® unit (for multiple door installations).
- No STB red or green LED displayed.
  - Check wiring and wire connections.

If the system appears to be working properly, perform the check as follows:
1. Start the door closing.
2. Pass an object through the beam. The door should stop and reverse to the fully open position.

C. Door Balance (Spring Tension)

Perform the check as follows:

- With the door closed, pull manual emergency release handle DOWN and toward door and let go to disengage the carriage from the drive chain or belt (see illustration).
- Raise and lower the door manually—it should move freely and smoothly.
- Raise door manually about 3’ to 4’ feet and let go.

   – Door should remain stationary or move very slowly.
   - If door moves quickly, CONTACT A TRAINED DOOR SYSTEM TECHNICIAN to have your door springs serviced.
   - Close the door.
   - Place the carriage in the “engage” position (see illustration).
   - Operate door using remote or wall control. The carriage will reattach itself to the drive chain/belt.
CORRECTIVE MAINTENANCE

Changing Light Bulbs

- Use extreme caution when working from a ladder or step stool.
- When replacing light cover, make sure wires are not pinched or near moving parts.
- Use only properly rated incandescent, LED or CFL light bulbs.
- DO NOT use bulbs with a rating greater than 60 Watts.
- Use A19 size light bulbs. DO NOT use bulbs having a short neck.

1. Disconnect power to door opener.
   - Open powerhead light cover by pressing down on upper locking tabs.
   - Remove light bulb.
   - Replace light bulb.
     - Use 60 watt incandescent bulbs or the CFL or LED equivalent.
   - Close powerhead light cover.

2. Reconnect power to door opener.
   - Test light operation.

Reset Open/Close Travel Limit
Performing all Travel Limit Settings steps (pages 7, 8 and 9) erases previous Travel Settings.

NOTE: The opener will not close the door automatically unless the Safe-T-Beam® System is installed and Limits are programmed.

WARNING

- Use extreme caution when working from a ladder or step stool.
- When replacing light cover, make sure wires are not pinched or near moving parts.
- Use only properly rated incandescent, LED or CFL light bulbs.
- DO NOT use bulbs with a rating greater than 60 Watts.
- Use A19 size light bulbs. DO NOT use bulbs having a short neck.

Remote Battery Replacement (1-button)
Replace the remote battery with a CR2032 coin cell type battery.
1. Slide the battery cover off (it’s the lower half of the remote’s case) by pressing on the case just below the indentation at the top of the cover and sliding it down. You may need to insert a coin into the indentation on the front of the case and pry to unlatch the battery cover in order to slide it off.
2. Slide out the old battery and slide in the new.
   - Be sure it is positive side UP.
3. Slide the battery cover on until it snaps into place.

Remote Battery Replacement
Replace remote battery with a CR 2032 coin cell battery.
1. Open remote case using a washer or coin that fits into the slot at top of remote.
2. Replace battery.
3. Align components and snap case closed.
Maintenance and Adjustments

ADJUSTMENT GUIDES

CAUTION
Door closing force is FACTORY set and requires no adjustment for normal operation.
• NEVER adjust the force settings to compensate for damage, including an unbalanced door, binding door track, or broken spring.
• Perform monthly a CONTACT REVERSE TEST. See page 9.

Force Settings
Force settings are pre programmed at the factory and “learned” during the Open/Close Limit settings steps (see pages 7-8). For normal use, these settings should not need adjustment with this unit.

However, conditions possibly requiring adjustment are:
1. Doors with very stiff weather seals.
2. Doors that start down, STOP, and reverse before closing.
3. Doors that start up, but STOP before they completely open.

Force Adjustment

3 Press up arrow button (+) and down arrow (–) simultaneously on the powerhead until the round LED turns RED.

2 Release the arrow buttons FLICKS BLUE 3 TIMES THE CURRENT UP FORCE SETTINGS WILL DISPLAY. See chart to right.

3 Press either arrow button until you reach the desired setting. (See chart at right.)

4 Press and release the program button.

5 Press either arrow button until you reach the desired setting.

6 Press and release the program button. THIS LOCKS IN THE UP SETTING.

7 Repeat “Force Control” on page 9

FORCE SETTINGS DONE
Repeat the Contact Reverse Test, page 9.

(continued next page)
LOCATING SAFE-T-BEAM PAIRS:
Source (Red LED) and Sensor (Green LED)

Single Garage Door
- Determine which side of the garage receives direct sunlight.
- Position the Source (Red LED) on the direct sunlight side.

Multiple Garage Doors
- NEVER position Safe-T-Beam® modules where signals will cross.
- Place the Source (Red LED) Safe-T-Beams on adjacent doors facing in opposite directions.

NOTE: Direct sunlight creates interference with Safe-T-Beam® sensors (green LED). Sensor modules CAN be positioned further away from the door opening if necessary to avoid sunlight but no further off the wall to maintain alignment with the Source (red LED) module.

WARNING
ELECTRICAL SHOCK
OPENING COVER MAY CAUSE ELECTRICAL SHOCK
Disconnect power from opener prior to removing cover.

Wiring Diagram (Basic Circuit—This diagram is for reference only.)
## Troubleshooting

### Operation

**PROBLEM**

**Opener does NOT run from wall console.**
- Turn Sure-Lock™ OFF (see page 5).
- Check power source.
  - Plug a lamp into outlet used for powerhead. If lamp works, power source is OK.
  - If not, check fuse or circuit breaker.
- If power is OK,
  - Check connections at powerhead terminals and at wall console.
  - Check for reversed, broken or cut wires. Staples can cut insulation and short wires. Repair or replace.

**Opener runs, but door does not move.**
- Make certain carriage is engaged with chain/belt pulley. See page 12. Refer to Installation poster or download poster from www.overheaddoor.com.
- Check to make sure chain/belt is not broken or OFF its pulley.
- Check all remotes.
- Replace remote battery with good one. See page 13.
- Program remote to powerhead. See page 10.

**Opener works from wall console, but NOT from remote.**
- Relocate remote inside car and/or point remote at garage door.
- Replace battery. See page 13.
- Reposition door opener antenna.
- Eliminate possible competing signals (satellite radio, etc.).

**Remote has less than 25 feet operating range or no operation.**
- If a NEW installation, check Door Arm position. Refer to Installation poster or download poster from www.overheaddoor.com.
- Check if limits are properly set. See pages 7-8 & 14.
- Check if Safe-T-Beam® Red LED is flashing.
- Check Safe-T-Beam® system for beam obstruction or misalignment of lenses.
- Check garage door for binding.
- If an operational problem exists, and opener will not close, the opener can be forced to close as follows: Press and hold the wall control button until door is completely closed.
- Check for interference from adjacent Safe-T-Beam® units.
- Contact Overhead Door at 1-800-929-3663.

**Door starts down, then STOPS and goes back up.**
- Check Safe-T-Beam® wire connections at powerhead and at STBs. See page 5, STB instruction, poster or website.
- Check if limits are properly set. See pages 7-8 & 14.
- Check CONTACT REVERSE. See page 9.
- Check garage door for binding.
- Check closing “FORCE” adjustment. See page 14.

**Safe-T-Beam® System malfunction.**
- Check if limits are properly set. See pages 7-8 & 14.
- Be sure door, opener, and springs are in good repair, properly lubricated and balanced.
- Check closing “FORCE” adjustment. See page 14.
- **WARNING**: If you suspect a problem with the garage door hardware or springs, visit www.overheaddoor.com and use the “dealer locator” to hire a local door service professional. NEVER try to repair door hardware or springs yourself.

**Door starts up, but STOPS before it is completely open.**
- Check if limits are properly set. See pages 7-8 & 14.
- Check door balance, condition, and door spring.
- Check opening “FORCE” adjustment. See page 14.
- **WARNING**: If you suspect a problem with the garage door hardware or springs, visit www.overheaddoor.com and use the “dealer locator” to hire a local door service professional. NEVER try to repair door hardware or springs yourself.

**Door will only run closed.**
- Turn Sure-Lock™ OFF (see page 5).
- Check if limits are properly set. See pages 7-8 & 14.
- Check door balance, condition, and door spring.
- Check opening “FORCE” adjustment. See page 14.
- **WARNING**: If you suspect a problem with the garage door hardware or springs, visit www.overheaddoor.com and use the “dealer locator” to hire a local door service professional. NEVER try to repair door hardware or springs yourself.

**Door opener starts for no reason.**
- Button stuck on wall control or remote.
- Was remote lost or stolen? Erase all remotes from powerhead memory and program new remotes. See pages 10-11.
### Troubleshooting

#### OPERATION (continued)

The Distributor of Overhead Door Corporation products, whose name appears below ("Seller") warrants to the original purchaser of the Standard Drive 650 & Legacy 850 garage door openers ("Product"), subject to all of the terms and conditions hereof, that the Product and all components thereof will be free from defects in materials and workmanship for the following period(s) of time, measured from the date of installation:

- MOTOR/GEARBOX - Seller warrants the motor for the FIVE (5) YEARS for Standard Drive 650
- MOTOR/GEARBOX - Seller warrants the motor for the TEN (10) YEARS for Legacy 850
- BELT - Seller warrants the belt for a period of FIFTEEN (15) YEARS.
- CHAIN - Seller warrants the chain for a period of FIVE (5) YEARS.
- PARTS - Seller warrants all other parts and components for a period of ONE (1) YEAR.
- ACCESSORIES - Seller warrants all accessories for a period of ONE (1) YEAR

Seller’s obligation under this warranty is specifically limited to repairing or replacing, at its option, the Product or any part thereof which is determined by Seller to be defective during the applicable warranty period. Any labor charges are excluded and will be the responsibility of the purchaser.

This warranty gives you specific legal rights, and you may also have other rights which vary from state to state. This warranty is made to the original purchaser of the Product only, and is not transferable or assignable. This warranty applies only to Product installed in a residential or other non-commercial application. It does not cover any Product installed in commercial or industrial building applications. This warranty does not apply to any unauthorized alteration or repair of the Product, or to any Product or component which has been damaged or deteriorated due to misuse, abuse, neglect, accident, failure to provide necessary maintenance, normal wear and tear, or acts of God or any other cause beyond the reasonable control of Seller, and does not cover batteries, or repairs or maintenance to door components.

ALL EXPRESS AND IMPLIED WARRANTIES FOR THE PRODUCT, INCLUDING BUT NOT LIMITED TO ANY IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, ARE LIMITED IN TIME TO THE APPLICABLE WARRANTY PERIOD REFLECTED ABOVE. NO WARRANTIES, WHETHER EXPRESS OR IMPLIED, WILL APPLY AFTER THE LIMITED WARRANTY PERIOD HAS EXPIRED. Some states do not allow limitations on how long an implied warranty lasts, so the above limitation may not apply to you.

IN NO EVENT SHALL OVERHEAD DOOR CORPORATION BE RESPONSIBLE FOR, OR LIABLE TO ANYONE FOR, SPECIAL, INDIRECT, COLLATERAL, PUNITIVE, INCIDENTAL OR CONSEQUENTIAL DAMAGES, even if Overhead Door Corporation has been advised of the possibility of such damages. Such excluded damages include, but are not limited to, loss of use, cost of any substitute product, or other similar indirect financial loss. Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you.

Claims under this warranty must be made promptly after discovery, within the applicable warranty period and in writing to the Seller whose name and address appear below. The Purchaser must allow Seller a reasonable opportunity to inspect any product claimed to be defective prior to removal or any alteration of its condition. Proof of purchase and/or the installation date, and identification as the original purchaser may be required. Upon determination by Seller that the Product or any part thereof is defective during the applicable warranty period, Seller will supply the purchaser with replacement parts or, at its option, a replacement Product (shipping and handling of any replacement part(s) or replacement Product also at purchaser’s expense). Seller may use new or reconditioned parts, or a new or reconditioned Product of the same or similar design.

There are no established informal dispute resolution procedures of the type described in the Magnuson-Moss Warranty Act.
